DETAILED ACTION

Response to Arguments

1. Applicant's explanation of the instant invention in pointing the difference with the cited prior art regarding claim 1 was persuasive.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 2891

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over over Speakman, US 2007/008756.

Speakman teaches an electrically conductive member having an electrically conductive film on a porous surface of a substrate, the electrically conductive film being a dried film of a wet applied film containing colloidal particles in various places of the disclosure especially in paragraphs 17, 18, 28, 55, 110, 151, 226, 233, 240, 243, 251, 464 and 480 and also using the film in IC chips and semiconductor substrates in column 1, lines 10 – 18, but fails to teach that the electrically conductive member has portions in contact with an organic semiconductor.

However, it would have been obvious to one with ordinary skill in the art at the time of the invention that the electrically conductive member has portions in contact with an organic semiconductor since organic semiconductors are known to be used in many commercial OLED and organic TFT devices and Speakman teaches use of organic semiconductors in paragraph 488.

Allowable Subject Matter

6. Claims 1 and 3 – 8 are now allowed.
